Executive Function Screening		
Raw score	Percentile	Level
25	94	Clinically Elevated

Overview

Sample Client's parent completed the Behavior Rating Inventory of Executive Function, Second Edition (BRIEF2) Screening Parent Form, a 12-item questionnaire designed to detect problems with self-regulation, on 02/16/2022. There are no missing item responses in the protocol.

Summary and Recommendations

Sample's Executive Function Screening raw score of 25 was higher than 94% of other females her age, indicating that there is a greater likelihood that this score is outside of normative expectations. Scores at this level are considered Clinically Elevated.

Students with clinically elevated scores are at substantially increased risk for self-regulatory difficulties. Referral for further evaluation, including completing the full BRIEF2 rating scale, is clearly warranted.

Item #	Parent Screening item	Response
1	When given three things to do, remembers only the first or last	Never
2	<i>Remaining content redacted for sample report</i>	Sometimes
3		Often
4		Sometimes
5		Sometimes
