**Client name:** Sample Client

**Client ID:** SC12345

**Age:** 50

**Date of birth:** 07/22/1970

**Gender:** Male

**Test date:** 09/29/2020

*This report is intended for use by qualified professionals only and is not to be shared with the examinee or any other unqualified persons. Since the questionnaire relies on self-report data, all responses should be verified by a clinician. A definitive diagnosis is made on clinical grounds, taking into account how well the patient understood the questionnaire, as well as other relevant information from the patient.*

## PHQ-9 Score Summary

## Interpretation and Recommendation

Sample, a 50-year-old, completed the Patient Health Questionnaire-9 (PHQ-9) on 09/29/2020. The PHQ-9 is a brief (9 item), self-administered depression screening tool. **Sample endorsed suicidal ideation, requiring immediate suicide risk assessment to determine if additional action is needed.** A score of 17 on the PHQ-9 indicates moderately severe symptoms, suggesting this individual is likely to be diagnosed with depression by a mental health professional. Follow up to obtain the history of present illness. Active treatment with either psychotherapy and/or pharmacotherapy is recommended.

## Items and Responses

Over the last 2 weeks, how often have you been bothered by any of the following problems?

PHQ-9 Items and Responses	
Item	Response (score)
1. Little interest or pleasure in doing things	Nearly every day (3)
2. <i>[Remaining item content redacted for sample report]</i>	More than half the days (2)
3.	Nearly every day (3)
4.	Several days (1)
5.	Not at all (0)
6.	Nearly every day (3)
7.	Several days (1)
8.	Nearly every day (3)
9.	Several days (1)
