The FAW tells you WHY a student struggles with writing

The FAW examines the underlying processes that support proficient written language skills. In addition to identifying the possibility of dysgraphia, the FAW is able to determine the subtype of dysgraphia.

- Designed to measure three subtypes of written language disorders (or dysgraphias). Results help specify, from a neuropsychological perspective, exactly why a student struggles with written language so you can develop appropriate, customized interventions.
- Examines the cognitive, motoric, and linguistic processes that occur in the process of building proficient written language skills from a brain-behavior perspective.
- Provides qualitative information about a student's writing skills, including a skills analysis available within most subtests that allows you to dig deeper into a student's abilities.
- Available for students from prekindergarten through college.
- Screening forms, ideal for progress monitoring, are also available.
- Standardized on a sample of 1,048 examinees from prekindergarten through college, drawn from 30 states and based on 2017 U.S. Census statistics.
- Includes intellectual development disorder, ADHD, fine motor deficits, and written language learning disability clinical samples.
- A new In-Person e-Stimulus Book, which allows for more hygienic face-to-face administration via tablet, is available for both the regular form and the Screening Form.

Index	Subtest			
Graphomotor	Alphabet Tracing Fluency	Motor Sequencing	Copying Speed	Motor Planning
Dyslexic	Homophone Spelling		Isolated Spelling	
Executive	Executive Working Memory	Sentence Scaffolding	Retrieval Fluency	Expository Writing
Compositional Writing	Copy Editing (optional)		Story Mapping (optional)	
FAW Total	All FAW subtests (excluding optional subtests)			
FAW Screening	Grades K–1, composed of the ATF, MS, and IS subtests; Grade 2+, composed of the ATF, IS, and EWM subtests
