The FAW tells you WHY a student struggles with writing

The FAW examines the underlying processes that support proficient written language skills. In addition to identifying the possibility of dysgraphia, the FAW is able to determine the subtype of dysgraphia.

- Designed to measure three subtypes of written language disorders (or dysgraphias). Results help specify, from a neuropsychological perspective, exactly why a student struggles with written language so you can develop appropriate, customized interventions.
- Examines the cognitive, motoric, and linguistic processes that occur in the process of building proficient written language skills from a brain-behavior perspective.
- Provides qualitative information about a student's writing skills, including a skills analysis available within most subtests that allows you to dig deeper into a student's abilities.
- Available for students from prekindergarten through college.
- Screening forms, ideal for progress monitoring, are also available.
- Standardized on a sample of 1,048 examinees from prekindergarten through college, drawn from 30 states and based on 2017 U.S. Census statistics.
- Includes intellectual development disorder, ADHD, fine motor deficits, and written language learning disability clinical samples.

Kits

FLYS-1 1475-KT	FAW Comprehensive Kit	\$678 VALUE	\$649
FLYS-1 1476-KT	FAW Screening Form Kit	\$414 VALUE	\$399
FLYS-1 1477-KT	FAW/FAR Combination Kit	\$1,364 VALUE	\$1,199
FLYS-1 1478-KT	FAW/FAR/FAM Combination Kit	\$2,025 VALUE	\$1,799

Manuals, books, and equipment

FLYS-1 1479-TM	FAW Professional Manual	\$139
FLYS-1 1480-TM	FAW Scoring Guide	\$69
FLYS-1 1481-TC	FAW Stimulus Book	\$199
FLYS-1 1482-TC	FAW Screening Stimulus Book	\$99
FLYS-1 1487-SK	FAW Scoring Templates	\$29
FLYS-1 1488-TC	FAW Cards for Sentence Scaffolding (includes box)	\$119

Forms and booklets

The Feifer Family is growing!

A comprehensive suite of reading, writing, and arithmetic assessment tools

You already use the **FAR** and the **FAM** with students who struggle in reading and math. Both tests use a neurodevelopmental approach to examine underlying cognitive processes that explain why students have difficulty and include interventions that address areas of deficit.

Coming in 2020—the Feifer Assessment of Writing (**FAW**)—will complete the Feifer Family of comprehensive school tools.

The FAR tells you WHY a student struggles with reading

The FAR doesn't just indicate IF a student may have a reading disorder—it goes even deeper to identify likely dyslexic subtypes, so you can create effective interventions, develop appropriate reading strategies, and monitor response to intervention.

- Developed with colorful, age-appropriate stimuli to engage even the most reluctant readers.
- Can be used with children as young as age 5 years to get struggling readers help sooner.
- Includes detailed recommendations to address the likely specific dyslexia type.
- Screening Form includes three subtests that yield a single composite score that helps determine whether further assessment is warranted.
- The FAR Interpretive Report on PARiConnect gives clinicians enhanced options, including detailed interpretations and recommendations.
- Includes 15 subtests that measure various aspects of phonological development, orthographical processing, decoding skills, morphological awareness, reading fluency, and comprehension skills.
- Standardized on a sample of 1,074 examinees in prekindergarten to college drawn from 30 states using a population-proportionate, stratified random sampling plan based on 2012 U.S. Census statistics.
- Includes clinical samples of more than 120 students with learning problems, ADHD, and intellectual developmental disorder.

The FAM tells you WHY a student struggles with math

The FAM is the only math assessment tool that examines the cause of students' math difficulties using a brain-based approach. It identifies specific math strengths and weaknesses to help you develop targeted interventions that work.

- Isolates, measures, and quantifies various subtypes of dyscalculia.
- Identifies students' math strengths and weaknesses.
- Includes 19 subtests that make up three indexes (Verbal, Procedural, and Semantic).
- The FAM Screening Form includes three subtests—one from each index—and is designed to identify children at risk for dyscalculia or math learning disability within an RTI delivery system model.
- Standardized on a sample of 1,061 examinees in prekindergarten to college drawn from more than 30 states and based on 2013 U.S. Census statistics.
- Offers grade-based normative data (with age proxies provided); age and grade equivalents and percentiles for subtest scores; and confidence intervals, percentile ranks, z scores, and normal curve equivalents for index scores.
- Includes clinical samples of more than 120 students with learning disabilities, ADHD, and intellectual developmental disorder.
