

The information you need...

# Get deeper results with the PAI Plus

## The advanced method for interpreting the wealth of data provided by the PAI®

Using the 22 nonoverlapping scales of the Personality Assessment Inventory™ (PAI®), the PAI Plus takes the existing items of the PAI and provides users with an updated method to interpret the data. The PAI Plus includes a Score Report and Clinical Interpretive Report based on new developments since the PAI was introduced.

### PAI® Plus

**PURPOSE** Provides an updated method to interpret PAI data

**AGE** 18 to 89 years

**FORMAT** e-Manual; online scoring via PARiConnect; download

## Get the enhanced report features you need to draw upon the depth of the PAI.

### PROFILE COMPARISONS

Gain valuable comparison information for context-specific norm groups with profiles overlayed onto the examinee's profile.

- Bariatric surgery candidates
- Child-custody evaluations
- Chronic pain patients
- College students
- Deployed military
- Police applicants
- Motor vehicle accident claimants

### FEATURES AND BENEFITS

The PAI Plus takes the existing PAI items and gives users an updated way to interpret the data. The PAI Plus offers:

- **DSM-5® update:** Diagnostic possibilities align with the criteria in this edition.
- **Alternative Model Profile:** An optional profile provides scores in accordance with the Alternative Model for Personality Disorders.
- **Additional supplemental indices:** Based on years of academic research, 15 supplemental indices provide additional profile information related to negative and positive distortion and random responding. Supplemental clinical indicators provide profile information related to suicidality, aggression, level of care, presence of ADHD, and more.
- **Insightful reports:** The PAI Plus Score Report and Clinical Interpretive Report include the original PAI scale/subscale profiles plus additional profile information, interpretive text, critical item endorsement, and item responses.
