

They're ready physically...

Make sure they're prepared mentally

Gain bariatric evaluation insights faster with our score report.

The PAI Bariatric compiles the results of the PAI into a **convenient digital report targeted to your bariatric surgery candidates**. The results allow you to evaluate psychological factors that, if left unattended, may negatively impact bariatric surgery outcomes.

PAI BARIATRIC

PURPOSE Compiles the results of the PAI into a convenient report targeted to your bariatric surgery candidates.

AGE 18-89 years

FORMAT Online administration and scoring via PARiConnect

TIME 20-55 minutes to administer; immediate scoring via PARiConnect

QUAL C

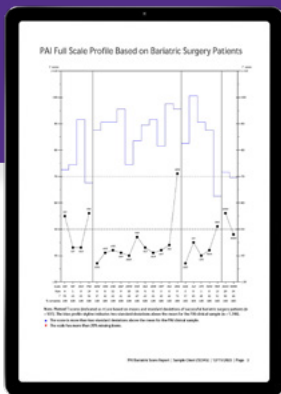

Organizes PAI results into a convenient report focused on bariatric patients.

QUICKLY ASSESS ONLINE

Administer online in about an hour and use the Score Report to help **DETERMINE** surgical **ELIGIBILITY**.

To assess your patients, log in to PARiConnect and administer the PAI in your office or remotely.

Make sure you've purchased PAI Bariatric Score Report uses, and select the Bariatric Score Report. Download the report as an RTF or PDF to create your own report or to share the results with members of the care team.

FEATURES AND BENEFITS

- Includes bariatric presurgical candidate norms, not just comparison group profiles.
- Uses the PAI to assess symptoms of depression, anxiety, mania, psychosis, suicidal ideation, substance abuse, trauma, and any adverse treatment experiences.
- Provides information to help you identify and treat preexisting psychopathology prior to surgery, determine which patients may need additional postoperative care, and provide alternative treatment strategies if the patient is not deemed a good fit for the procedure they are seeking.
- Incorporates diagnostic possibilities aligned with DSM-5® criteria.
- Can be used alongside the **Multidimensional Health Profile (MHP)** in an assessment battery.
