

Using PAR's Mendeley Bibliographies

Amy Kovacs Giella, BA

Jennifer A. Greene, PhD

Introduction

Although bibliographies about certain topics or subjects can be invaluable, a major disadvantage is that once they are published or made available, they inevitably become outdated as new research continues to be published. Mendeley—an online reference manager—has created a solution to this problem because it can be updated continuously, allowing up-to-date bibliographies to be accessed and/or downloaded at any time by anyone with Internet access. Individuals can create a free account at www.mendeley.com, then choose to continue via the online website platform or to download the desktop application for a more flexible user interface.

PAR's Continued Customer Commitment

PAR continually strives to provide excellent supplemental resources to support the use of our products. In addition to white papers and presentations, PAR offers product-specific bibliographies that can be downloaded as a Word document from www.parinc.com/Supplemental-Resources or that can be accessed online through Mendeley using any of the links below. Use of this free resource is encouraged to facilitate research and collaboration on the topics related to that particular assessment. PAR currently offers bibliographies for the following products:

BRIEF[®] 2

Behavior Rating Inventory of Executive Function[®], Second Edition

<https://www.mendeley.com/community/brief2/>

Iowa Gambling Task[™], Version 2

Using the Mendeley Website

After creating an account, users may join product- or topic-specific groups and view the group's overview page, members, and the documents (e.g., references to journal articles or books) within that group. The overview page is the central dashboard of the bibliography and allows users to easily navigate between pages and invite colleagues to access the bibliography.

Figure 1 shows the documents page for the Personality Assessment Inventory (PAI) group. The documents page displays a list of all references in the order they were uploaded; therefore, it is an ideal place to check for new additions to the bibliography.

The screenshot displays the Mendeley website interface for the Personality Assessment Inventory (PAI) group. The top navigation bar includes links for Feed, Library, Suggest, Groups (highlighted), Datasets, Careers, and Funding, along with a search icon and a notification bell. The main header area features the PAI logo, the text 'PUBLIC GROUP', and the group name 'Personality Assessment Inventory (PAI)'. A blue 'Invite members' button is visible on the right. Below the header, a navigation menu shows 'Overview', 'Members', 'Documents' (underlined), and 'Settings'. A link 'View group documents in library' is also present. The main content area is titled 'Documents (1588) + Add' and lists two documents. The first document, added on June 7, is titled 'The construction and the initial validation of the Cognitive Bias Scale for the Personality Assessment Inventory' by Gaasedelen O, Altmaier D, Welch C, and Basso M, published in 'The Clinical Neuropsychologist' (2019). Its objective is described as: 'This study describes the derivation and initial validation evidence of a novel Personality Assessment Inventory (PAI) scale designed to be sensitive to cognitive response bias, as defined by poor performance on performance validity tests (PVTs), in the contex... (more)'. The second document, added on May 7, is titled 'Differentiating Dark Triad Traits Within and Across Interpersonal Circumplex Surfaces' by Downgillo E and Pincus A.

Figure 1. View of the documents page for the Personality Assessment Inventory (PAI) group.

In the library view (Figure 2), sort the references alphabetically or by date added, as well as view each reference's citation information, abstract, author tags, and other information. Users can add a reference to their personal Mendeley account for future use by clicking the check box next to the desired reference and see tags assigned to references, if applicable.

The screenshot displays the Mendeley Library interface. At the top, navigation tabs include 'Feed', 'Library' (selected), 'Suggest', 'Groups', 'Datasets', 'Careers', and 'Funding'. On the left, a sidebar shows 'MY LIBRARY' and 'GROUPS', with a group named 'Personality Assess...' selected. The main area shows a list of references with checkboxes and a 'Sort' dropdown set to 'Added (newest)'. The selected reference is:

- The construction and the initial validation of the Cognitive Bias Scale for the Personality Assessment Inventory
Gaasedelen O, Altmaier D, Welch C, et al. in *The Clinical Neuropsychologist* (2019) 7 Jun

The right sidebar shows the details for this article, including the title, authors (Gaasedelen O, Altmaier D, Welch C, Basso M), journal name (*The Clinical Neuropsychologist*, 2019), and an objective statement: "Objective: This study describes the derivation and initial validation evidence of a novel Personality Assessment Inventory (PAI) scale designed to be sensitive to cognitive response bias, as defined by poor performance on performance validity tests (PVTs), in the context of neuropsychological assessment. The Cognitive Bias Scale (CBS) is a..."

Using the Mendeley Desktop Application

Figure 3 shows the Mendeley desktop application view of the PAI group library. This is the most powerful way to use Mendeley. Sort by author, article title, year published, publication name, or the date the reference was added to the group. Use the search feature or search through the bibliography for articles of interest by tags or author keywords.

Conclusion

PAR will continue to add more product-specific bibliographies to Mendeley, as well as update existing groups with new research. In addition, this white paper will be updated with additional links each time a new group has been created. Interested individuals can also refer to www.parinc.com/Supplemental-Resources for additional resources, such as product presentations and white papers. It is PAR's goal that these bibliographies can serve as a starting point to help foster discussion, increase collaboration, and create a better understanding of the complex topics these products were developed to address.
