

Score Report

by
COVR, Inc. and PAR Staff

Patient Identification

Name: Sample A. Client
Patient ID: 123-45-6789
Date of Birth: 09/18/1983
Age: 21
Gender: Male
Test Date: 06/10/2005
Examiner: Example Clinician, PhD

COVR software is useful in informing clinical decisions regarding the risk assessment of violence to others. COVR software should not be viewed as a replacement for expert clinical judgment and experience, nor should it be viewed as the sole factor on which to base a risk assessment. Rather, an expert's evaluation of risk should be based on all relevant factors and should be the product of the expert's clinical judgment and experience. COVR was developed and tested in acute civil inpatient populations, and its validity in assessing violence risk among other populations is unknown.

By providing COVR as a tool to assist a clinical expert in the assessment of risk, the Publisher and Authors are not participating in any risk assessment or otherwise joining in any risk assessment. As a result, the Publisher and Authors expressly disclaim any liability allegedly resulting directly or indirectly from a clinical expert's assessment of risk. The Publisher and Authors are not liable for the negligence of any clinical expert or other clinician in the formulation of a risk assessment, including the use and/or application of the COVR software to a specific individual or individuals.

Estimate of Violence Risk

Risk Probability

The likelihood that Sample A. Client will commit a violent act toward another person in the next several months is estimated to be between 20 and 32 percent, with a best estimate of 26 percent.*

Risk Frequency

Of every 100 people like Sample A. Client, between 20 and 32 are estimated to commit a violent act toward another person in the next several months, with a best estimate of 26 people.**

Risk Category

Sample A. Client is estimated to pose an Average risk of committing a violent act toward another person in the next several months.

*In comparison, the likelihood that a randomly chosen patient discharged from an acute civil inpatient unit will commit a violent act toward another person in the next several months is estimated to be between 16 and 21 percent, with a best estimate 19 percent.

**In comparison, of every 100 patients discharged from acute civil inpatient units, between 16 and 21 are estimated to commit a violent act toward another person in the next several months, with a best estimate of 19 people.

Patient Information

Marital Status: (not specified)
Admission Legal Status: Involuntary
GAF Score: (not specified)
Prior Hospitalizations: 2

Reason for Admission

Was a suicide threat a reason for admission? Yes
Was depression a reason for admission? Yes
Was decompensation a reason for admission? No
Was substance abuse or intoxication a reason for admission? No
Were personal problems a reason for admission? No

DSM-IV Diagnoses

Primary Diagnosis Code: 301.83
Secondary Diagnosis Code: 304.00
Tertiary Diagnosis Code: None/Missing
