the BRIEF2A!

## Assess your adult clients with the gold-standard in executive function testing.

Assessing executive functions can be challenging because of their complex and dynamic nature—like problem solving, planning, or decision-making—compared to more domain-specific functions like language or motor skills. The **Behavior Rating Inventory of Executive Function<sup>®</sup>, Second Edition–Adult Version** (BRIEF2A) is a standardized rating scale that captures an adult's (or an informant's) view of their own executive functions, or self-regulation, in their everyday environment.

### BRIEF2<sup>®</sup>A

**PURPOSE** Assess adult executive functioning and self regulation

**AGE** 18-99 years

**FORMAT** Paper and pencil; online administration & scoring via PARiConnect

**TIME** 10–15 minutes

**QUAL** B

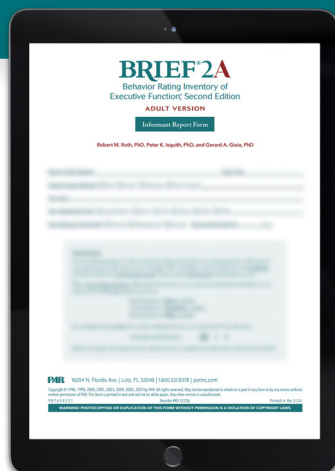

## Provides the information you need to help adults exhibiting executive function difficulties.

### INFORMANT REPORT FORM

The BRIEF2A Informant Report is beneficial when assessing clients exhibiting cognitive deficits due to diagnoses like TBI, stroke, or dementia, because it helps address any concerns the clinician may have about the client's ability to reliably rate their own executive function.

### FEATURES AND BENEFITS

- **More reliable:** The BRIEF2A has fewer items (75 to 70), and an updated normative sample based on the 2021 U.S. Census and is therefore more representative of the current population.
- **More accurate:** Updated to the three-factor model found in the BRIEF2 which characterizes the executive function deficit more clearly, leading to more effective interventions.
- **More applicable:** The population is living longer—the extended age ranges up to 99 years meets the demand for more assessment tools for older adults.
- **New forms:** The updated Spanish translation expands the utility of the BRIEF2A to be used with Spanish-speaking adults in various clinical settings.
- **New reports:** The new Progress Monitoring Report shows progress over time and the new Multi-Rater Report shows the difference between raters.
